E-commerce Order Analytics Report

Dataset period: 2023-01-01 to 2025-06-30

A concise business review of revenue, product, customer, payment, referral, coupon, and order-status performance.

Prepared by Muhammed Hassan O

Data snapshot: strong order volume, weak realized revenue

1,200 order records across 19 fields. Net revenue uses only Delivered and Shipped orders.

1,200
Total orders

1,189
Unique customers

$1.26M
Gross revenue

$488.8K
Net revenue

3,535
Quantity sold

The headline

The dataset generated $1.26M in gross revenue, but only $488.8K is realized revenue after filtering to shipped and delivered orders.

The pressure point

Successful orders account for 38.8% of all orders, while cancellations and returns together represent 41.4%.

The business question

Growth should focus less on attracting more orders alone and more on converting placed orders into completed revenue.

Executive summary: where performance is concentrated

The business has clear winners, but order health is limiting revenue capture.

38.8%
Success rate

20.8%
Cancellation rate

20.6%
Return rate

$1.1K
Avg. order value

Most important findings

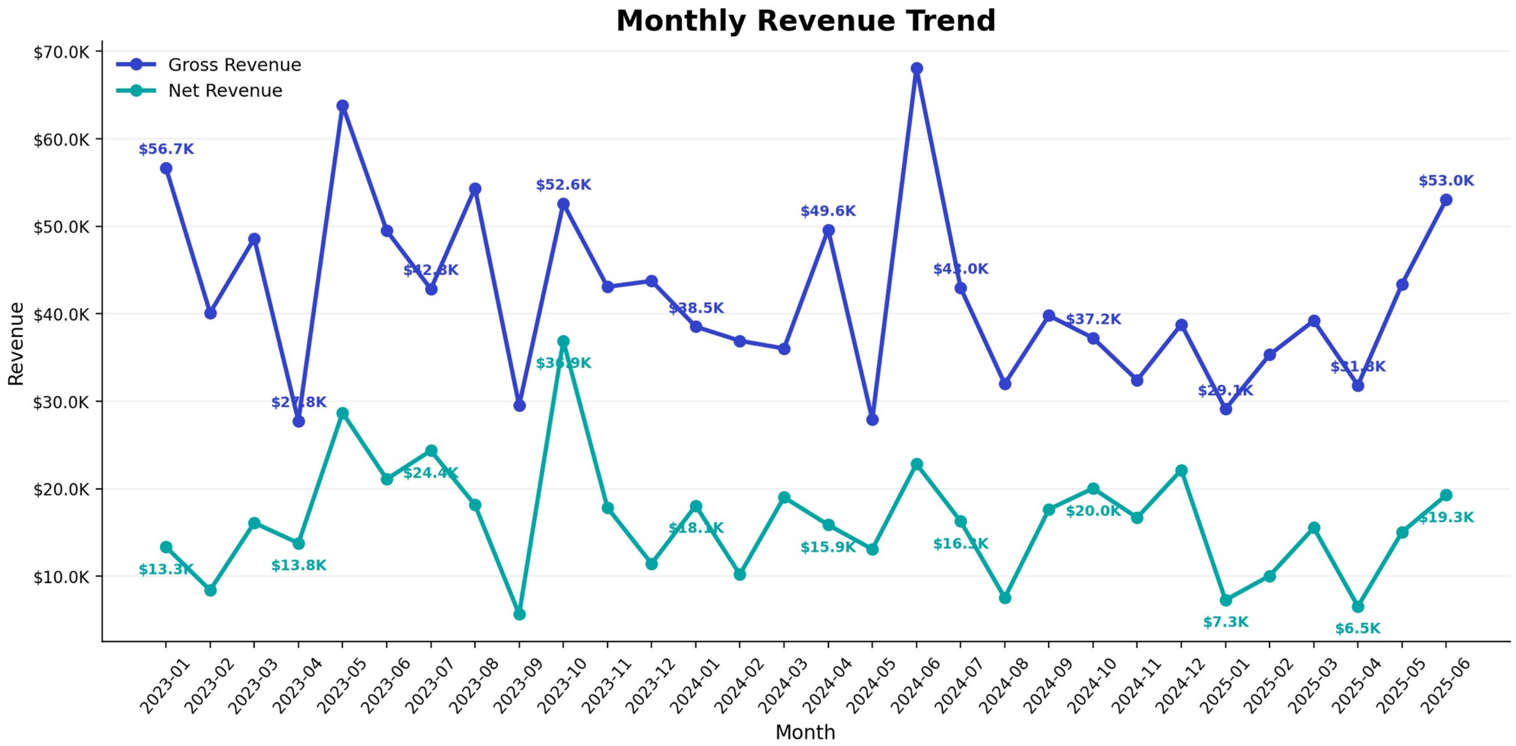
Printer is the top product by net revenue at $82.5K.
Instagram is the best referral source, producing $108.2K net revenue.
Online is the leading payment method by order count and realized revenue.
2023-10 is the strongest month by net revenue at $36.9K.

Main business implication

The company has enough demand signals to work with. The biggest opportunity is operational: reduce cancellations and returns, protect the strongest products, and double down on the channels already converting into net revenue.

Revenue trend: gross demand is higher than realized revenue

The gap between gross and net revenue shows how much value is not being converted into completed orders.



Peak month

2023-10 delivered the highest net revenue: $36.9K from 47 orders.

Revenue leakage

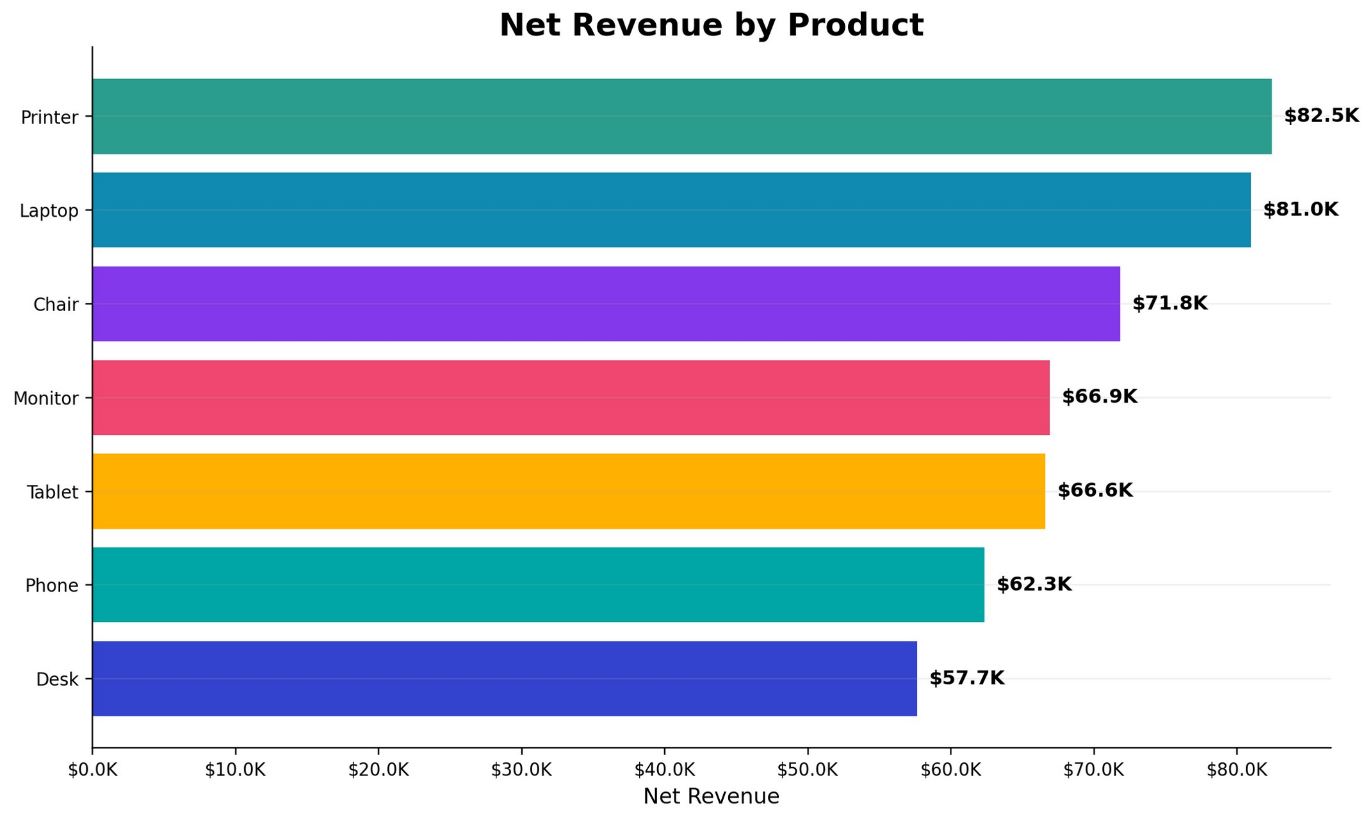
Net revenue is 38.6% of gross revenue. The rest is tied to cancelled, returned, or pending orders.

Action focus

Track order completion by month, then investigate the months where gross revenue rises but net revenue does not follow.

Product performance: revenue leadership is concentrated

Product strategy should protect the top performers while improving weak categories.



Top product

Printer leads with $82.5K in net revenue and 181 orders.

Product implication

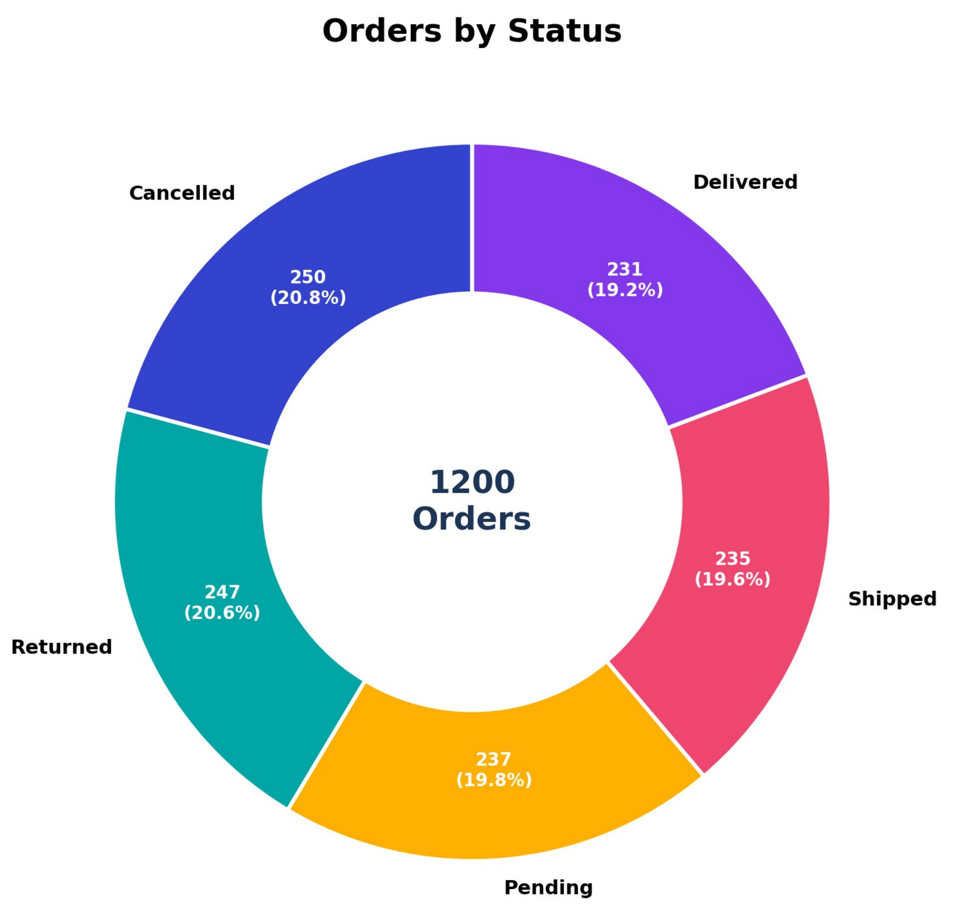
The best product is not just a sales item; it is the category to protect with stock availability, faster delivery, and stronger upsell bundles.

Next analysis

Break each product into cancellation, return, and payment failure rates to identify where operational friction is hurting revenue.

Order health: cancellations and returns are the biggest drag

The order-status mix explains why net revenue is far below gross revenue.



Order-status interpretation

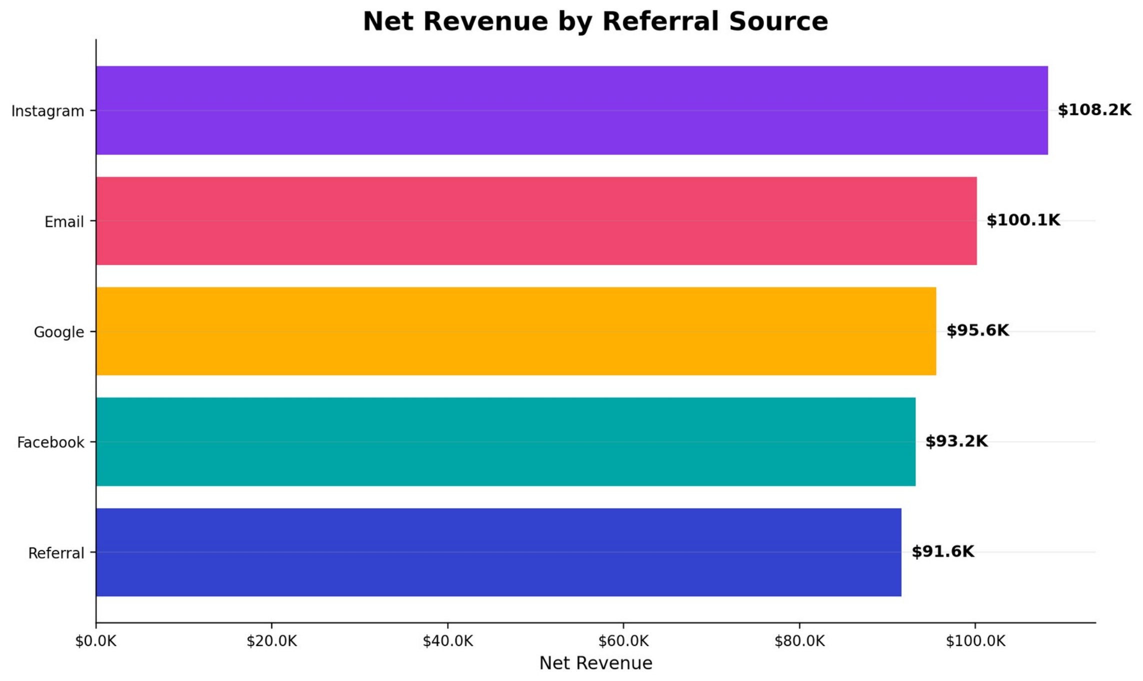
Only 466 of 1,200 orders are shipped or delivered.
Cancelled orders alone represent 20.8% of all orders.
Returned orders represent another 20.6% of all orders.
The fastest route to growth is to improve fulfillment quality before increasing acquisition spend.

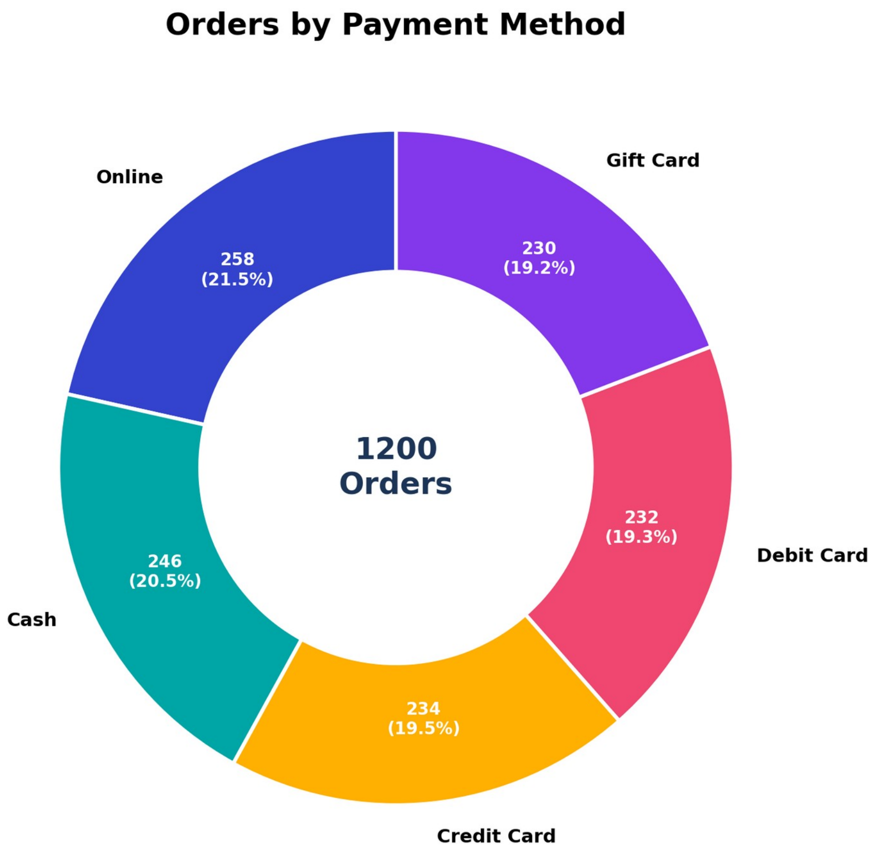
Completed order share: 38.8%

Muhammed Hassan O | hazssanmuh@gmail.com

Acquisition and payment: the strongest channels are visible

Referral source and payment method performance show where to concentrate growth effort.



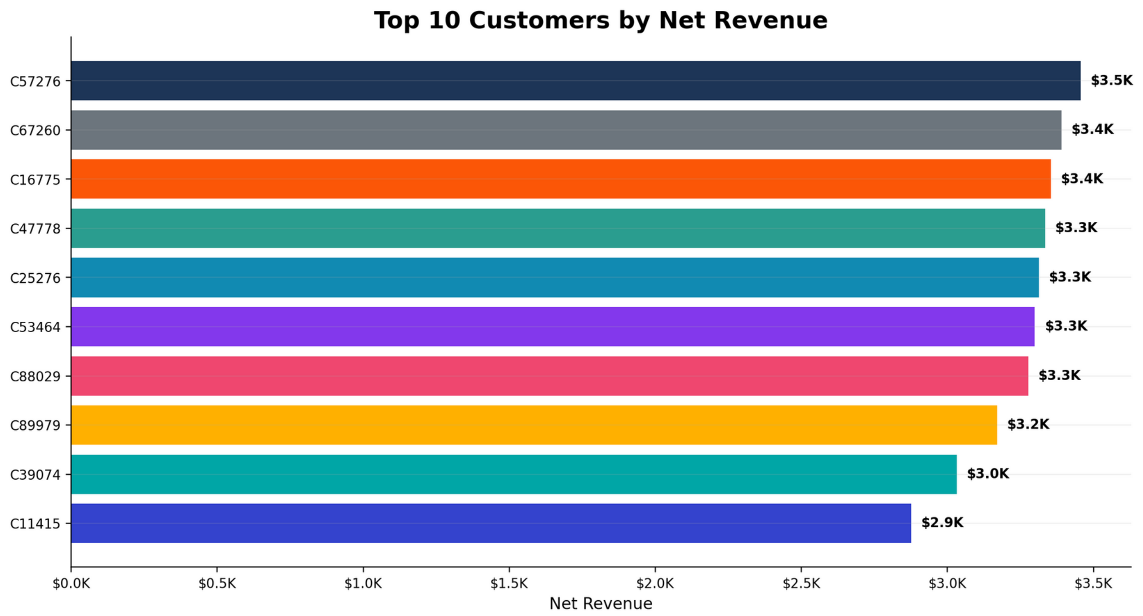


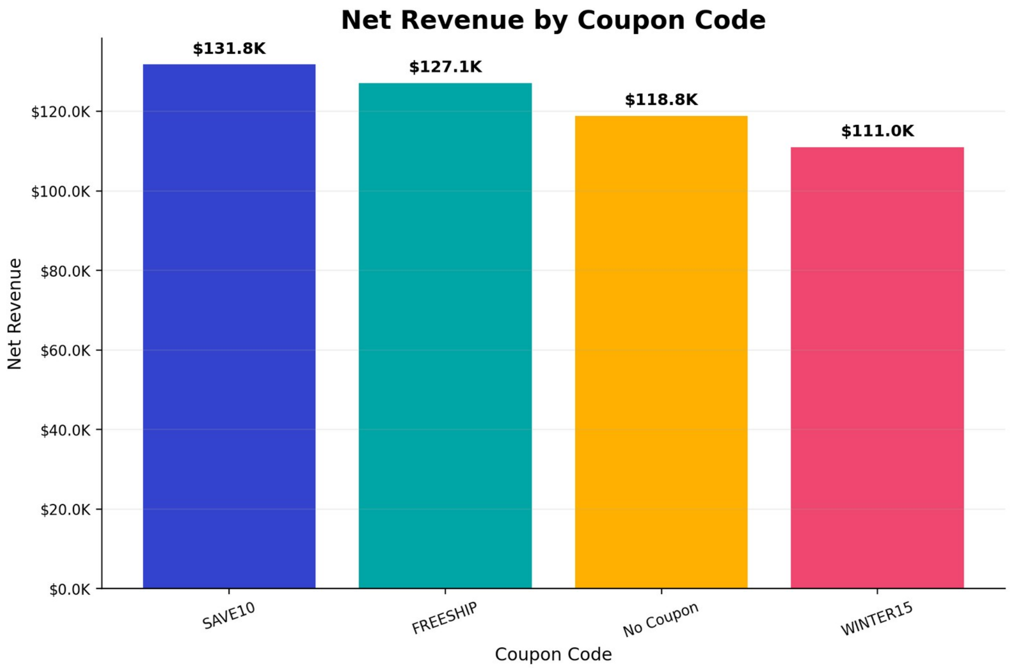
Instagram is the best revenue source

Online payment leads realized revenue

Customers and coupons: repeat value is still shallow

Top customers exist, but the customer base is mostly broad and thin rather than deeply repeated.





1,189 customers across 1,200 orders

No Coupon still generated $118.8K net revenue

Conclusions

The dataset shows clear demand, but realized revenue is being held back by order completion issues.

1. Protect what already works

Prioritize Printer, Instagram, and Online as the current growth backbone.

2. Fix revenue leakage

Reduce the combined cancellation and return pressure of 41.4% before scaling traffic.

3. Build customer depth

Convert more first-time buyers into repeat buyers with retention campaigns, bundles, and post-delivery engagement.

4. Improve monthly monitoring

Review gross vs net revenue monthly to catch fulfillment, return, or cancellation spikes early.
